

WEEKLY PROJECT PROGRESS REPORT (WPPR)

For week commencing 07 March 2026

Programme:	BCA (Artificial Intelligence, Cloud Computing & Devops)
Student Name:	Muhammed Umer Sufaidh
WPPR:	WPPR 01
Register Number:	23BCAICD085
Campus ID:	27079
Project ID:	PRJN26-055
Major Project Title:	Multi-Cloud Hybrid Strategy for Agriculture
College:	YENEPOYA INSTITUTE OF ARTS, SCIENCE, COMMERCE AND MANAGEMENT
Course:	BCA (Artificial Intelligence, Cloud Computing and DevOps) With IBM & TCS
Semester:	VI Semester
Academic Year:	2023-2026
Internal Guide:	Internal Guide

Targets Set for the Week:

- Understand the project requirements and objectives
- Identify the scope of Multi-Cloud Hybrid Backup for Agriculture
- Research existing backup strategies and cloud platforms
- Finalize tools and technologies to be used (Python, AWS S3, Google Drive API)
- Set up project folder structure and GitHub repository

Progress / Achievements for the Week:

- Successfully reviewed the project brief PRJN26-055 and understood the core objective of building a multi-cloud backup system for agriculture data.
- Identified key components: Local Backup, Google Drive API integration, and AWS S3 storage.
- Researched Python libraries: shutil for local file copy, google-auth for Drive API, boto3 for AWS S3.
- Created a preliminary project plan with milestones and timelines for 7 weeks.
- Set up a local VS Code development environment and created the initial project folder structure (AgriBackup/).

Future Work Plans:

- Conduct detailed literature review on cloud backup strategies
- Study Google Drive API documentation and AWS Free Tier setup

- Begin design of the system architecture diagram
- Identify sample agriculture data files to use for testing

Implementation Shown:

Implementation Shown: **No**
