

WEEKLY PROJECT PROGRESS REPORT (WPPR)

For week commencing 14 March 2026

Programme:	BCA (Artificial Intelligence, Cloud Computing & Devops)
Student Name:	Muhammed Umer Sufaidh
WPPR:	WPPR 02
Register Number:	23BCAICD085
Campus ID:	27079
Project ID:	PRJN26-055
Major Project Title:	Multi-Cloud Hybrid Strategy for Agriculture
College:	YENEPOYA INSTITUTE OF ARTS, SCIENCE, COMMERCE AND MANAGEMENT
Course:	BCA (Artificial Intelligence, Cloud Computing and DevOps) With IBM & TCS
Semester:	VI Semester
Academic Year:	2023-2026
Internal Guide:	Internal Guide

Targets Set for the Week:

- Conduct literature review on multi-cloud backup strategies
- Study Google Drive API and AWS S3 documentation
- Design the system architecture for the backup solution
- Identify required Python packages and install them
- Define the failover logic flow

Progress / Achievements for the Week:

1. Completed literature review on hybrid cloud storage, backup redundancy, and failover mechanisms in agriculture data management.
2. Studied Google Cloud Console documentation and created a new GCP project 'agribackup-493710' for the service account.
3. Reviewed AWS S3 Free Tier limitations and created an AWS account for testing (region: ap-south-1).
4. Designed a system architecture diagram showing Local → Google Drive → AWS S3 failover flow.
5. Installed required Python packages: boto3, google-auth, google-api-python-client, streamlit.

Future Work Plans:

- Set up Google Service Account and download credentials JSON
- Create an AWS S3 bucket (agri-backup-umer-2026) in ap-south-1 region

- Begin writing the CONFIG dictionary in backup.py
- Create sample agriculture data files for testing

Implementation Shown:

Implementation Shown: **No**
