

WEEKLY PROJECT PROGRESS REPORT (WPPR)

For week commencing 21 March 2026

Programme:	BCA (Artificial Intelligence, Cloud Computing & Devops)
Student Name:	Muhammed Umer Sufaidh
WPPR:	WPPR 03
Register Number:	23BCAICD085
Campus ID:	27079
Project ID:	PRJN26-055
Major Project Title:	Multi-Cloud Hybrid Strategy for Agriculture
College:	YENEPOYA INSTITUTE OF ARTS, SCIENCE, COMMERCE AND MANAGEMENT
Course:	BCA (Artificial Intelligence, Cloud Computing and DevOps) With IBM & TCS
Semester:	VI Semester
Academic Year:	2023-2026
Internal Guide:	Internal Guide

Targets Set for the Week:

- Set up Google Cloud Service Account and configure credentials
- Create and configure AWS S3 bucket
- Write CONFIG dictionary in backup.py
- Create sample agriculture data generator function
- Test basic file operations in Python

Progress / Achievements for the Week:

- Successfully created a Google Cloud Service Account (agribot@agribackup-493710.iam.gserviceaccount.com) and downloaded service_account.json credentials.
- Created AWS S3 bucket 'agri-backup-umer-2026' in ap-south-1 region and configured IAM access keys.
- Written the CONFIG dictionary in backup.py with all required parameters: source_dir, local_backup_dir, gdrive_folder_id, s3_bucket_name, and region.
- Implemented the create_sample_agriculture_data() function generating 5 sample files: crop report, soil analysis, weather log, irrigation schedule, and pesticide usage.
- Tested basic Python file read/write operations and confirmed the development environment is fully operational.

Future Work Plans:

- Implement the local backup function (backup_local) using shutil.copytree
- Add timestamped folder creation for each backup session
- Set up logging with Python's logging module to backup_log.txt
- Test local backup with sample agriculture data

Implementation Shown:

Implementation Shown: **No**
