

WEEKLY PROJECT PROGRESS REPORT (WPPR)

For week commencing 28 March 2026

Programme:	BCA (Artificial Intelligence, Cloud Computing & Devops)
Student Name:	Muhammed Umer Sufaidh
WPPR:	WPPR 04
Register Number:	23BCAICD085
Campus ID:	27079
Project ID:	PRJN26-055
Major Project Title:	Multi-Cloud Hybrid Strategy for Agriculture
College:	YENEPOYA INSTITUTE OF ARTS, SCIENCE, COMMERCE AND MANAGEMENT
Course:	BCA (Artificial Intelligence, Cloud Computing and DevOps) With IBM & TCS
Semester:	VI Semester
Academic Year:	2023-2026
Internal Guide:	Internal Guide

Targets Set for the Week:

- Implement the local backup function using shutil.copytree
- Set up logging system to backup_log.txt
- Add timestamp-based backup folder naming
- Test local backup with sample agriculture data
- Handle exceptions for missing source directory

Progress / Achievements for the Week:

1. Implemented backup_local() function in backup.py using shutil.copytree() to copy the entire agriculture_data/ directory to a timestamped folder inside local_backup/.
2. Configured Python's logging module with both FileHandler (backup_log.txt) and StreamHandler so all logs appear in the terminal and file simultaneously.
3. Added datetime-based folder naming (backup_YYYYMMDD_HHMMSS) to ensure each backup session creates a unique folder without overwriting previous ones.
4. Successfully tested local backup with all 5 sample agriculture files; confirmed 5 files backed up and log entry generated correctly.
5. Added FileNotFoundError handling for missing source directory with appropriate error logging.

Future Work Plans:

- Implement the Google Drive backup function using the Drive Desktop sync approach
- Test Google Drive backup by copying files to the sync folder
- Add the backup_google_drive() function to backup.py
- Verify files appear in Google Drive after sync

Implementation Shown:

Implementation Shown: **Yes**
